## **AutoCAD and Its Applications BASICS**

## **Exercise 14-4**

- 1. Continue from Exercise 14-3 or start AutoCAD.
- 2. Start a new drawing from scratch or use a template of your choice. Save the drawing as EX14-4.
- Draw a polyline with at least five vertices. Draw a second polyline with the same number of vertices. Make each polyline smooth using the Fit option of the PEDIT command.
- 4. Return one polyline to its original form using the **Decurve** option of the **PEDIT** command.
- Practice with the **Undo** option by first drawing a series of polyline segments.
  After using the **PEDIT** command to make several changes, use the **Undo** option to return to the original polyline.
- 6. Resave and close the file.
- 7. Keep AutoCAD open for the next exercise, or exit AutoCAD if necessary.
