

## Exercise 32-3

1. Continue from Exercise 32-2 or start AutoCAD.
2. Open the Cappuccino Express sheet set you created in Exercise 32-2.
3. Add a new subset named Structural to the sheet set. Apply the following properties:
  - **Create Folder Hierarchy:** Yes (Notice that a path to the Structural folder appears in the **New Sheet Location** property because you set **Create Folder Hierarchy** to Yes.)
  - **Publish Sheets in Subset:** Publish by Sheet 'Include for Publish' Setting
  - **Prompt for Template:** No
  - **Sheet Creation Template:** Navigate to the Architectural US Sheet Set.dwt file. The only available layout is **ARCH C-SIZE**.
4. Add a new subset named Details to the Structural subset. Do not create a folder hierarchy; apply all default settings.
5. Remove the Details subset.
6. Keep AutoCAD open for the next exercise, or exit AutoCAD if necessary.
