Exercise 5-7

1. Continue from Exercise 5-6 or start AutoCAD.

2. Open the EX5-6 file you saved during Exercise 5-6.

3. Keep EX5-6 open, and start a new drawing from scratch or use a template of your choice. Save the new drawing as EX5-7.

4. Activate **DesignCenter**.

5. Pick the **Open Drawings** tab to list the open drawings in the **Tree View** pane. Load the **Content** pane with the layers from EX5-6.dwg.

6. Select all the layers shown in the **Content** pane and then drag and drop the layers into the new drawing. Notice the message on the command line indicating that duplicate layers were ignored.

7. Open the **Layer** drop-down list and view the layers now available in the drawing to confirm that the layers from EX5-6 imported as expected.

8. In **DesignCenter**, select the **Folders** tab to display the desktop hierarchy in the **Tree View** pane. Navigate to the AutoCAD Sample folder.

9. In the **Tree View** pane, select Mechanical Sample and then pick the + symbol next to Mechanical-Multileaders.dwg. Load the linetypes from this drawing file into the **Content** pane.

10. Select the CENTER and HIDDEN linetypes and load the linetypes into the new drawing.

11. Save and close the files.

12. Keep AutoCAD open for the chapter review and problems, or exit AutoCAD if necessary.
