Exercise 21-1

1. Start AutoCAD.
2. Use the Options dialog box and Drawing Window Colors dialog box to change the color elements and font for the command line window to your personal liking.
3. In the Drawing Window Colors dialog box, select the 3D perspective projection context.
4. The first six elements listed in the Interface elements: list together form the overall color of the drawing area. Change the color of these elements to suit your personal liking. For example, the default colors result in an overall dark color. You may prefer to work on a lighter background.
5. Change the colors of the other elements as needed to create a good contrast with your background color(s).
6. Once you are satisfied with your modifications, apply the changes and exit the Options dialog box.
