

Exercise 15-1

1. Start AutoCAD if it is not already started.
2. Start a new drawing from scratch or use a template of your choice. Save the drawing as EX15-1.
3. Draw a 3-unit line, a 2-unit by 4-unit rectangle using the **RECTANGLE** command, a \varnothing 4-unit circle, an arc with a 6-unit radius, and an ellipse of your own design.
4. Turn on dynamic input and the coordinate display field in the status bar.
5. Experiment with using grips to identify the location of grip points and observe basic object dimensions. Do not make changes to the objects.
6. Resave and close the file.
7. Keep AutoCAD open for the next exercise, or exit AutoCAD if necessary.
