## AutoCAD and Its Applications ADVANCED

## Exercise 15-3

1. Start a new drawing.
2. Using the POINTCLOUDATTACH command, insert the file Hill_Tower.rcs available on the companion website. Insert the file at the coordinates $0,0,0$.
3. Display an isometric view of the drawing. Set the projection to parallel. Refer to the illustration below.

4. Save the drawing as EX15-3A.
5. Select the point cloud to display the Point Cloud contextual ribbon tab.
6. Using the Point Size slider in the Display panel, adjust the point size. Note that higher values increase the density of the point cloud. Set the point size to 2 .
7. Using the Transparency slider in the Visualization panel, set the transparency to 35 and view the result. Reset the value to 0 .
8. In the Visualization panel, select the Elevation option from the Stylization drop-down list.
9. Pick the Color Mapping button in the Visualization panel to open the Point Cloud Color Map dialog box. Notice that the color scheme is set to Earth. Adjust the number of colors to 15. Pick OK to close the Point Cloud Color Map dialog box. Refer to the illustration below.

10. Pick the Color Mapping button in the Visualization panel to open the Point Cloud Color Map dialog box. Change the color scheme to Greens. Adjust the number of colors as desired. Pick OK to close the Point Cloud Color Map dialog box and view the result.
11. Pick the Color Mapping button in the Visualization panel to open the Point Cloud Color Map dialog box. Change the color scheme to Spectrum. In the Range of colorized points area, uncheck the Apply to extents of point cloud option. Change the Interval height: setting to 85.93, the Maximum elevation: setting to 110, and the Minimum elevation: setting to -405.56 . Pick OK to close the Point Cloud Color Map dialog box and view the result. Refer to the illustration below.

12. Using the Stylization drop-down list in the Visualization panel, select the Scan Colors, Object Color, and Normal options to change the color style. Change the setting back to Elevation.
13. Pick the Color Mapping button in the Visualization panel to open the Point Cloud Color Map dialog box. Change the color scheme to Earth. Check the Apply to extents of point cloud option. Pick OK to close the Point Cloud Color Map dialog box.
14. In the Cropping panel, select the Polygonal option from the Crop drop-down list. Pick several points forming a polygonal shape to crop the upper portion of the point cloud as shown in A. Pick the Invert button to invert the crop as shown in B. Continue to experiment with the point cloud cropping options. When finished, select the Uncrop All button to restore the original display.
