## **AutoCAD and Its Applications BASICS**

## **Exercise 15-1**

- 1. Start AutoCAD if it is not already started.
- 2. Start a new drawing from scratch or use a template of your choice. Save the drawing as EX15-1.
- 3. Draw a 3-unit line, a 2-unit by 4-unit rectangle using the **RECTANGLE** command, a Ø4-unit circle, an arc with a 6-unit radius, and an ellipse of your own design.
- 4. Turn on dynamic input and the coordinate display field in the status bar.
- Experiment with using grips to identify the location of grip points and observe basic object dimensions. Do not make changes to the objects.
- 6. Resave and close the file.
- 7. Keep AutoCAD open for the next exercise, or exit AutoCAD if necessary.
