Exercise 1-7

1. Continue from Exercise 1-6 or start AutoCAD.
2. Pick each ribbon tab to view the contents.
3. Pick the Home tab and move the cursor over several buttons to display a tooltip for each.
4. Pick the title at the bottom of the Draw panel to expand the panel to show the additional options.
5. Pin the expanded options to the screen.
6. Unpin and collapse the additional Draw panel options.
7. Pick the LINE command button on the Draw panel of the Home tab to access the LINE command.
8. Press [Esc] to exit the LINE command.
9. Pick the flyout on the Measure tool button on the Utilities panel of the Home tab to view the flyout.
10. Pick the Area flyout option and notice that the Area button now appears on the Utilities panel, although the flyout name remains Measure.
11. Press [Esc] to exit the command.
12. Pick the Layer Properties tool button on the Layers panel of the Home tab to view the Layer Properties Manager palette.
13. Modify the display characteristics of the ribbon and the Layer Properties Manager palette, including minimizing, floating, docking, auto-hiding, and transparency.
14. Reload the Drafting & Annotation workspace to return the display to the default characteristics.
15. Keep AutoCAD open for the next exercise, or exit AutoCAD if necessary.
