

Exercise 8-7

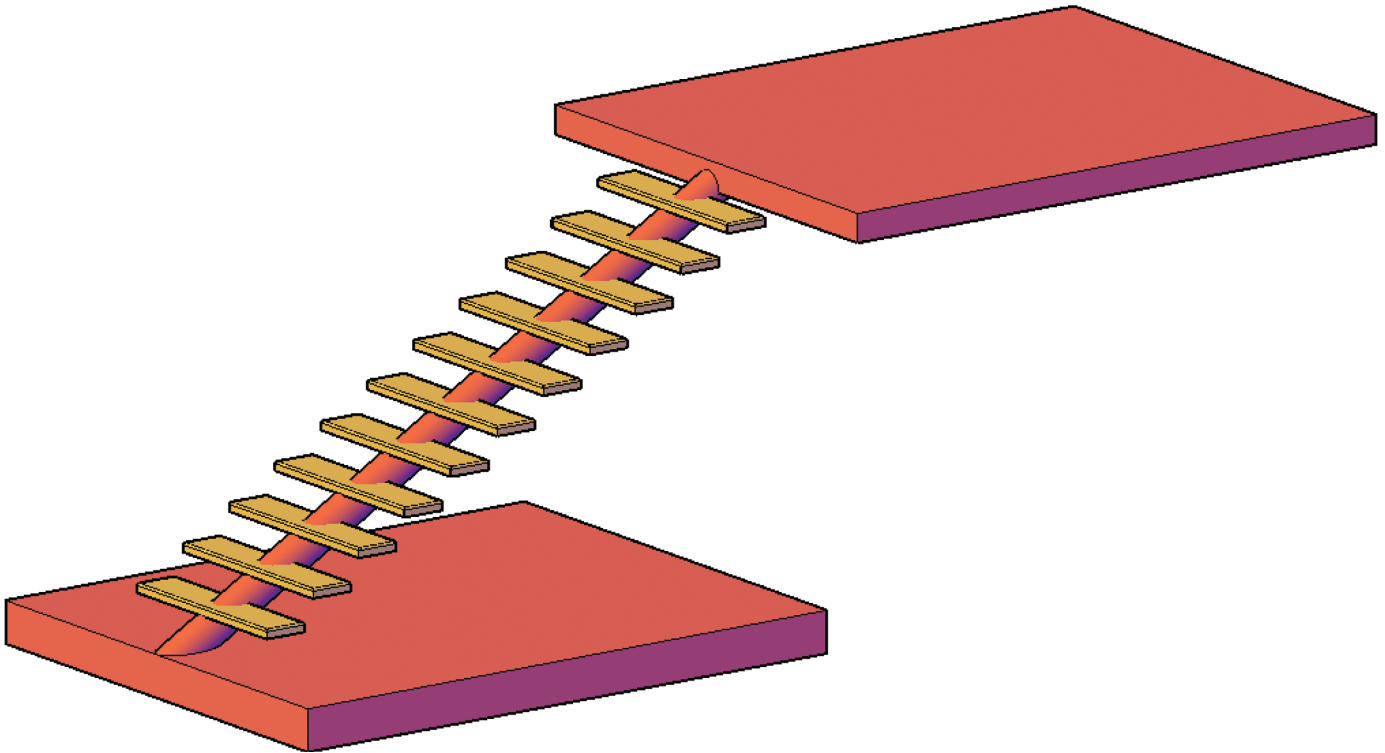

1. Open the drawing EX08_07A.dwg available on the companion website.
2. Use the **ARRAYPATH** command to array the single stair along the path shown in the following illustration.

3. Specify 11 items to array. Use the **Divide** option to space the items evenly along the path.

(Continued on the next page)

4. Thaw the Base layer. Refer to the following illustration.

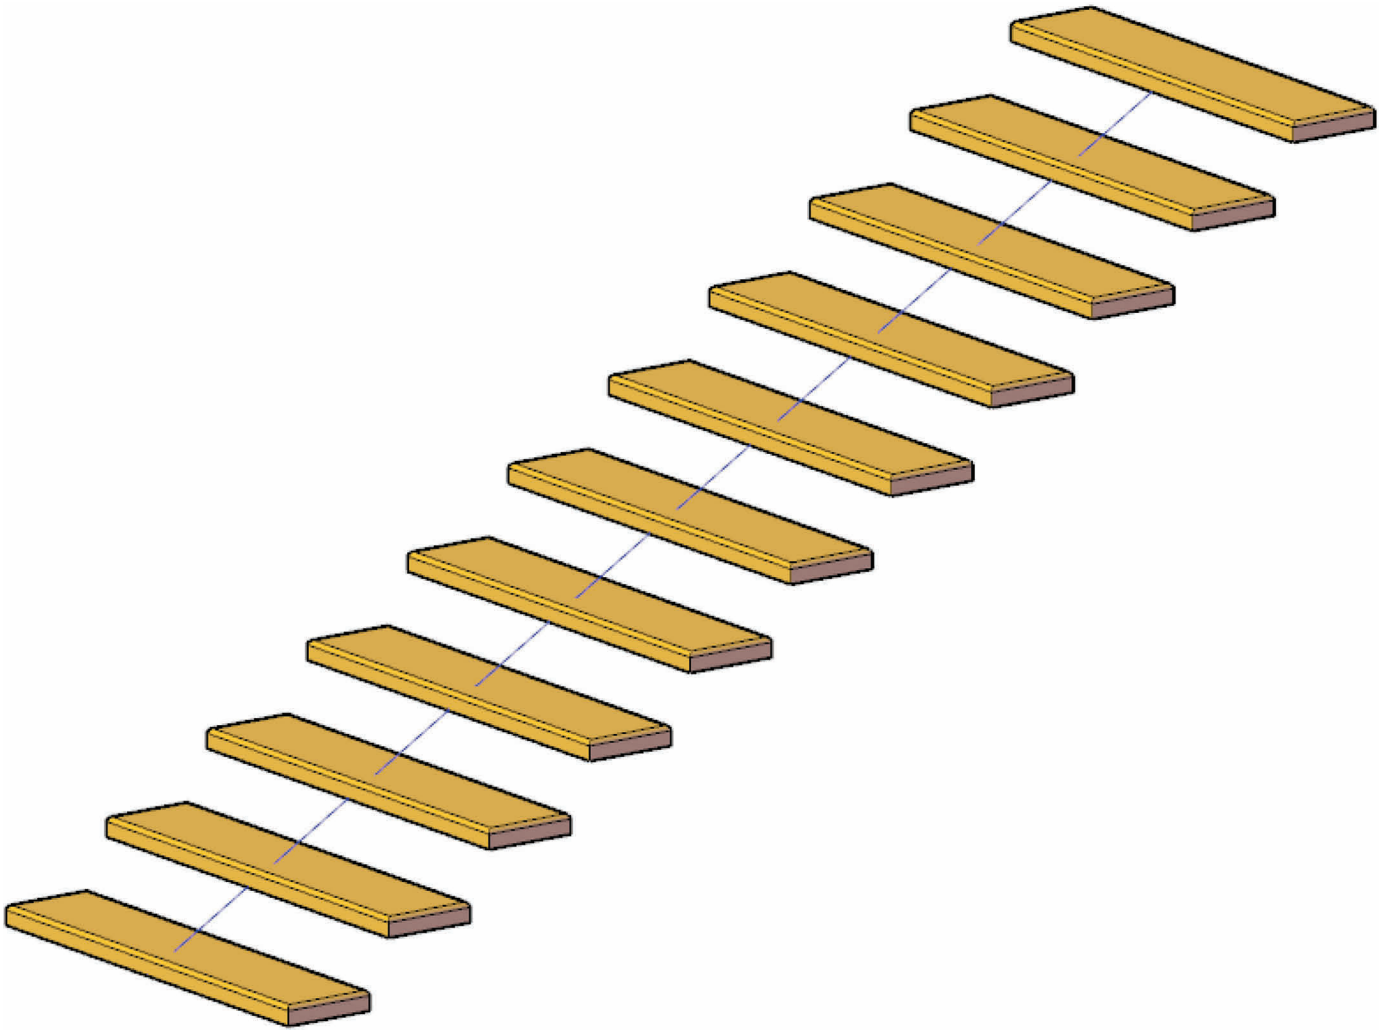

5. Save the drawing as EX8-7A.

6. Open the drawing EX08_07B.dwg available on the companion website.

(Continued on the next page)

7. Select the associative array of stairs shown in the following illustration and right-click. Select **Properties** to open the **Properties** palette.

8. Change the number of rows to 5 and the row spacing to 5'.

(Continued on the next page)

9. Thaw the Base layer. Refer to the following illustration.
10. Save the drawing as EX8-7B.
