

Exercise 10-12

In this exercise, you will sculpt multiple surfaces that form a watertight surface boundary to create a solid model.

1. Open the drawing EX10_12.dwg available on the companion website.
2. Set the Solid layer current.
3. Set the **DELOBJ** system variable to zero (0).
4. Enter the **SURFSCULPT** command and draw a window around the surfaces making up the guitar to create the selection set. Press [Enter] to complete the command.
5. Move the solid model of the guitar to the right of the watertight surfaces as shown in the illustration below.
6. Save the drawing as EX10-12.
